ACKNOWLEDGEMENT

I thank the almighty for giving me the courage and perseverance in completing the main-project. This project itself is acknowledgements for all those people who have give us their heartfelt co-operation in making this project a grand success.

I am thankful to the library management of out university which helped us a lot in gathering the information and the content for the project.

I am greatly indebted to project guide, **Mr. Omar Farooq** Assistant Professor, CSE326 , Computer Science and Engineering Department, for providing valuable guidance at every stage of this project work. I am profoundly grateful towards the unmatched services rendered by him. Last but not least, we would like to express our deep sense of gratitude and earnest thanks giving to our dear parents for their moral support and heartfelt cooperation in doing the main project.

TITLE

ONLINE INSURANCE MANAGEMENT SYSTEM

INTRODUCTION :

Insurance is a concept which involves two parties, namely the insurer and the insured also referred to as the policyholder. The insurer is the insurance company whereas the policyholder is the one who avails the service. In the insurance process the policyholder has to pay certain amount of fees at prescribed time intervals to the insurance company and in return the insurer agrees to bear the financial losses and expenses of the policyholder. Therefore the rise of financial losses completely falls on the insurance company.

The insurance company has to maintain lot of information such as transactions related to Insurance policies, premiums, policy maturity, agent management, agent commission calculation etc.

All these are to be automated and a web application is required to relate all of them relatively and logically so that the current system can be replaced and accepted without major changes and problems. The web application should provide quick access to the records maintained and must reveal the important reviews about the business so that the growth can be easily compared and should provide with the

various reports showing the related details so that the important decisions could be taken easily.

OBJECTIVE:

The main objective of the developed system is to allow admin users to register insured persons with their name, date of birth, residence address, medical history and also policy details. After giving registering all the insured persons, website should provide management facilities like delete unwanted persons' data. And also should provide awareness to the visitors about micro insurance through articles.

SCOPE :

This application can be used by any Insurance company to maintain the Insurance management, daily transactions, policy registration etc.

SYSTEM REQUIREMENTS SPECIFICATION

SOFTWARE REQUIREMENT :

This web site requires the following software in Server (computer), clients (computers)

Server-side Requirements:

Operation System : Windows XP ,vista ,7 or above

Web Server : IIS 6.0(Internet Information Server)

Framework : ASP.NET 2.x frame work enabled

Minimum Space : 1GB (including Database space) and may grow depends on the Customer information

Client-side Requirements

Browser : Any HTML 5.1 or prior version compliant browser with a Minimum Screen resolution of 800X600 pixels (best viewed in 1024 x 768 resolution).
